

OK Token

PREFACE

DeFi, namely decentralized finance, is one of the scenarios most consistent with the characteristics of blockchain (decentralized, open, anonymous, trusted, value transfer, etc.) among the current blockchain landing applications.

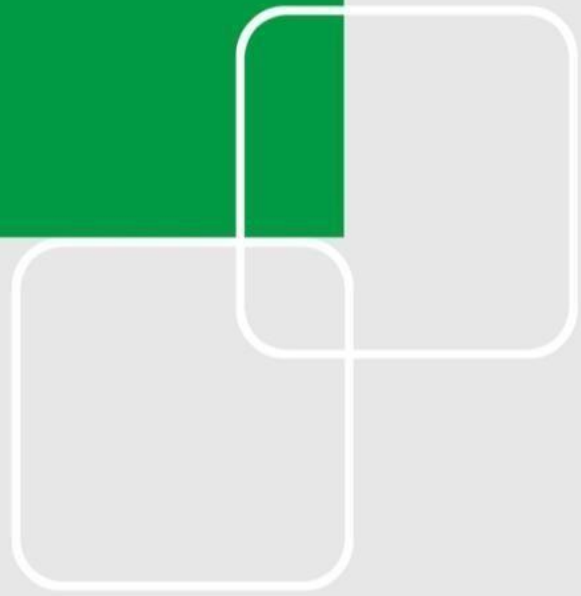

There are only about 1,000 mainstream DeFi projects. The BSC blockchain system enables large-scale commercial applications, almost zero-cost transactions and second-level on-chain verification.

At present, games and DEX developed on BSC have achieved success, and the user experience has been greatly improved.

However, in the field of DeFi, BSC projects are still not active, one of the main reasons is that compared with the BSC that has been running for many years, asset types and liquidity on the BSC main network are relatively scarce, while DeFi in essence is mainly mortgage, replacement and circulation among assets. Therefore, how to solve the liquidity and diversity of assets on BSC is the key to the success of DeFi on BSC.

The emergence of OK DEFI is to solve this problem currently existing in BSC. Meanwhile, the high performance of BSC IO is also the basis for OK DEFI to finally get a good experience

Project Development Background

What is OK DeFi?

OK DeFi is made possible by a dedicated team of community members and engineers.

OK DeFi is a BSC blockchain platform designed to provide passive forms of revenue, In addition to the automatic dividend SHIB(`0x2859e4544C4bB03966803b044A93563Bd2D0DD4D`) bonus embedded in the contract

OK DeFi will also use funds generated by the acquired company to conduct manual buybacks and burn OK DeFi,

resulting in a further tightening of supply and helping to further stabilize prices.

What is DEFI?

OK DeFi can break down the boundaries of financial markets between countries.

Breaking zero eliminates the huge yield gap in global financial markets and greatly reduces the friction of capital flows.

You can also manage your money and investments

OK DeFi will also use funds generated by the acquired company to conduct manual buybacks and burn OK DeFi, resulting in a further tightening of supply and helping to further stabilize prices.

ESTABLISHING TRUST

The community plays a very important role in the success of this project and its mission, therefore, to build trust and the confidence of the holder

Allocation to booking

OK no pre-sale, fair launch on bsc

ROADMAP

PHASE 1:

- √ -Token creation
- √ -Website development
- √ -Release of white Paper

PHASE 2:

- Marketing
- Pancakeswap launch
- dApp integration
- OK swap
- CMC listing
- Coingecko listing

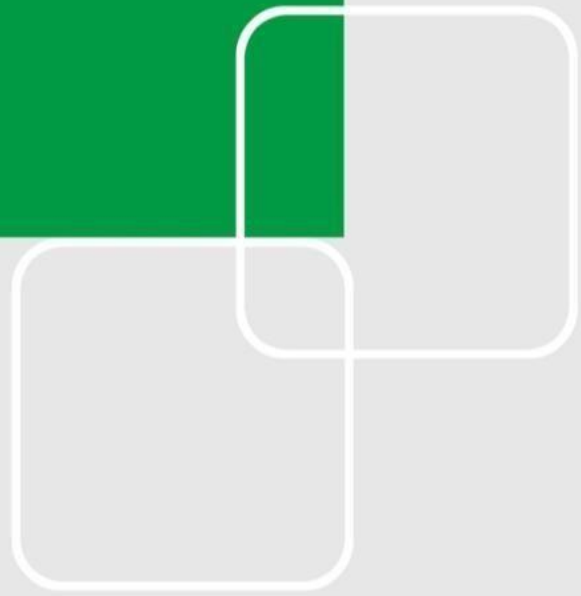

PHASE 3:

- NFT market place
- Voting dApp integration
- 250M Marketcap
- Non-profitable Charity donation
- Manual token buy back and burn

PHASE 4:

- CEX listing
 - Staking
 - Marketing
 - 500M Marketcap
 - Hodlers meet up party to celebrate the success
 - MORE TO ADD SOON
-

TOKENOMICS

OK TAX: 13%

Auto divide bonus SHIB	3%
Add Liquidity	3%
Buyback fund	2%
Marketing	4%
Burning	1%

DISTRIBUTION

Total circulation	1 quadrillion
Bonus for early pioneers	7%
Added Liquidity	33%
Lock-up dividend buyback	5%
Pledge mining pool(Lock-up)	5%
Initial destruction	50%

Mining pool 5% is not enabled. Linear release after it is enabled.

**The 5% holder is locked in and will never and cannot be sold
and dividends are used to buy back.**
