Fomo3D game for K0 and OK as tickets will be launched soon

K0&OK official news: The Fomo3D game for K0 (OK) and OK (Okcoin) tickets will be launched on (UTC+8) 22:00, April 15th. This is first FOMO3D game on BSC. The previous model "LAST WINNER on ETH" once up to 30,000 users after its launch, and the bonus pool was up to 100,000 ETH, which caused blockage on the Ethereum chain. The upgraded version of the FOMO3D game is made by the K0&OK team, the founder of Kill Zeros Game (OK).

The opportunity to

When people talk about their "crypto journey," it's usually filled with wonder and discovery as they delve into the philosophy of decentralization and the benefits of disruptive technology. But for crypto enthusiasts, this can be confusing, and even dangerous, because scammers and spammers are everywhere.

At the same time, individuals and project teams struggle to become opinion leaders on their social accounts, attract large followings, or stand out among thousands of communities.

WHITE PAPER

Current social media platforms don't explicitly target the cryptocurrency community.

A true social media platform with a large following focused on cryptocurrencies and non-cryptocurrencies has yet to emerge. While there are over 100 million wallet addresses globally and the number of crypto and non-crypto enthusiasts is growing every day, why not provide a dedicated public opinion forum and social media platform for the crypto community?

Platform features

The wallet login

OK Socialfi believes in "trust, but verify." Users log in using wallets such as OKMask. Users can display their non-functional memory collection on their profile page, bringing another level of trust in social relationships.

Users who post and showcase their activities can follow each other throughout the community. The platform also ranks users based on their influence and non-functional net worth. Based on a shared interest and belief in encryption, OK Socialfi facilitates organic connections between users.

Content mining/monetization model

Traditionally, content creators' content is owned by the platform, and the end audience's attention is manipulated by an algorithm that the creator has no power or right to influence. Advertisers and platforms, not content creators

Social media stalwarts, get the lion's share of the profits.

We're here to make a difference.

OK SocialFi, as a SocialFi platform, is owned and governed by its users. By introducing the concept of "living by talking and writing", content creation itself acts as a form of mining. Active content creators and discussion participants on OK Socialfi continue to benefit from our native token OK. The vast majority of native tokens will be distributed to users who generate content, creating a form

Sustainable, inclusive and truly productive mining.

WHITE PAPER

OK token

Distribution

The total supply	1,000,000,000,000,000
The destruction	51%

Fair launch

Market value is low

High potential

Matters needing attention:

Destroy the formula and distribution

Buy/sell every time in swap;Wallet transfer cost: 13% commission

These actions occur with each transfer:

AUTO DIVIDEND SHIB for holders	3%
Into black hole destruction	1%
Auto add Liquidity	3%
Community Marketing	3%
BUYback	2%

WHITE PAPER

OK's utility

1. Users participate in content mining through OK (3% SHIB 0x2859e4544C4bB03966803b044A93563Bd2D0DD4D super dividend automatically to the account wallet The more OK you hold, the more dividends you get).
2. When the platform gains a specific user base and traffic, advertisers can buy and use OK Socialfi to publish promoted posts, broadcast messages, and insert ads into the news stream (Twitter's annual AD revenue is about \$4 billion, Facebook's average is \$100 billion).
3. Fund raising "investment opportunities. Based on the platform's traffic and user advantages, the platform will get the investment quota of high-quality projects, which will be allocated to the owners of the OK society in proportion to the proportion of the OK society. Users can decide whether to participate in the investment, but the quota will be guaranteed.
4. OK Socialfi can be used as a reward mechanism for users.

Dao governance

1. 100% of spatial social networks are allocated to communities, which are mainly owned and managed by communities.
2. Members of the OK society will have the right to make recommendations and vote on their implementation.

The roadmap

1. Blockchain technology and NFT allow the creation of digital projects that are impossible to replicate. This gives rise to the concept of digital scarcity. OK Socialfi enables the authentication and presentation of non-functional assets, bringing another layer of trust to social activities based on shared interests and beliefs. OK Socialfi aims to be the leading platform and hub for Socialfi and the gateway for everyone who wants to participate in OK.
2. With OK SocialFi tokens, OK SocialFi returns ownership and governance to users. OK Socialfi will gradually decentralize content, data, and storage, and eventually move to Web 3.0.
3. OK Socialfi will introduce more high-quality Defi and Gamefi projects to the platform and community, allowing OK social users to seamlessly connect social, financial, and gaming into a cohesive OK.
